YOUR WORKSITES IN COMPLETE SERENITY

The renovations of infrastructures, or the rehabilitation of buildings in an occupied zone need a strict organization to limit unexpected problems that can appear during construction.

During construction, the flow of people, the security of the users, the reduction of noise pollution, and the access to the construction need to be controlled. They are an issue for the operator and the subcontractor.

SmartChantier proposes an easy solution to manage and centralized the whole of the information's related to life on construction sites. Moreover, SmartChantier offers a way to communicate directly between the operator of the construction and the residents. When the district is impacted by the construction, the system can be open to the residents to communicate.

The agents equipped with the application can consider more of the pieces of information collected on the constructions.

HOW DOES IT WORK?

Integrations of the information related to the construction (localization, nature, length of time, hindrance) in the platform Smart Chantier (interfacing possible with existing tools)

Diffusion of that information (push, email, text message, website) to the residents, customers, and shopkeepers.
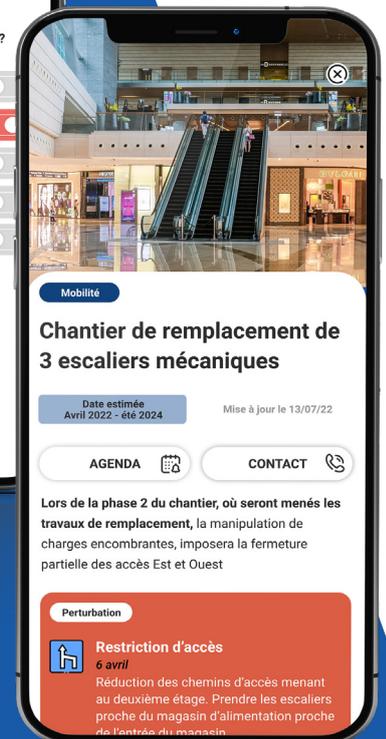

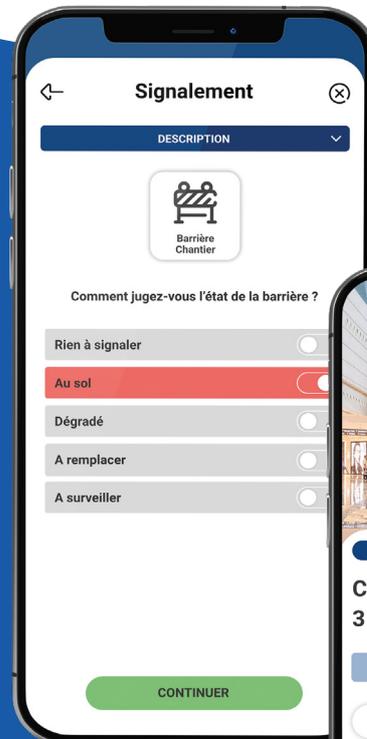

Geolocate hindrances on the map

Bring up reports from the residents and the mediators through the application (pictogram library, photos)

Receptionning of those reports to the operator, diffusion of the information to the actors concerned in the form of an automated alert.

OUR **CONTRIBUTION**

Ubiplace developed a digital solution (Saas model) available through WebApp. The operator personalizes the type of pieces of information that he wants to communicate with the residents. He defines the procedure to collect information following the data that he wants to receive.

The residents reports, can be treated in real-time from the application, through a dedicated website, or the setting of telephone hotlines. The back office platform is interoperable with other software back offices.

Ubiplace offer you

◆ A complete system with ergonomic administration tools for professionals

◆ Personalized support throughout the installation of the solution

◆ Tools on conformity with the RGPD

ubiplace

is a french start-up that developed innovative solutions in terms of data collection on-site. The application goes from pieces of information on public constructions zones or private to infrastructures operations, the state of the heritage, and climate vigilance.

Founded by 4 entrepreneurs, Egis entered the capital of Ubiplace, in 2021, up to 25%.

OUR **STRENGTHS**

◆ Inform and strengthen communication between stakeholders concerned with the construction zone.

◆ Gain responsiveness in the processing of reports using an intuitive and standardized form of the template.

◆ Prevent the difficulties through statistical tools that analyze the feedback of the resident's experience to take adequate decisions.
