

Certain organization operations and maintenance of public equipment, road, or building with consequences on the public space lead to a complex organization that can be badly felt by the resident, shopkeepers, and users.

The daily life of the inhabitants is impacted by the change in traffic direction, closure of streets or pavement, difficulty accessing shops, public services, electricity or gas cuts, etc...

Receiving reliable information in a short time is a claim of the citizens and the public authority. The issue of the smart city is to improve considerably the daily life of the citizens through our new technologies and innovative application.

Ubiplace developed a digital solution that answers those challenges and improves the acceptability of worksites by residents.

## HOW DOES IT WORK?

**Integrations of the information related to the construction** (localization, nature, length of time, hindrance) in the platform Smart Chantier (interfacing possible with existing tools)

**Diffusion of that information** (push, email, text message, website) to the residents, customers, and shopkeepers.

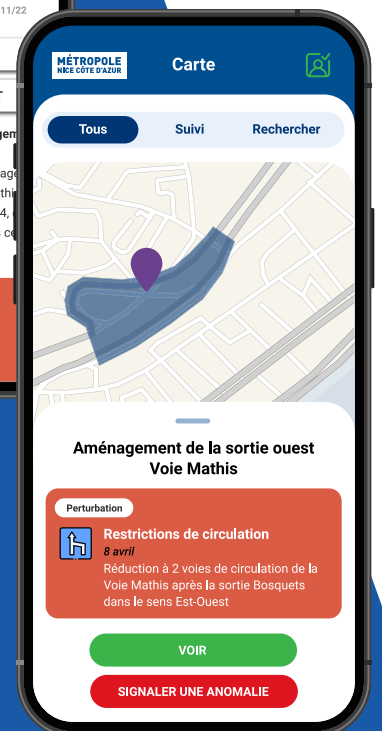

**Geolocate hindrances** on the map

**Bring up reports from the residents and the mediators through the application** (pictogram library, photos)

**Receptionning of those reports to the operator,** diffusion of the information to the actors concerned in the form of an automated alert.

# OUR CONTRIBUTION

Ubiplace developed a digital solution (SaaS model) available through WebApp. The operator personalizes the type of information that he wants to communicate with the residents. He defines the procedure to collect information following the data that he wants to receive.

The resident's reports can be treated in real-time from the application, through a dedicated website, or the setting of telephone hotlines. The back office platform is interoperable with other software back offices.

## THE ACTORS CONCERNED

Territorial Communities  
Public Institutions

Project manager  
Customers

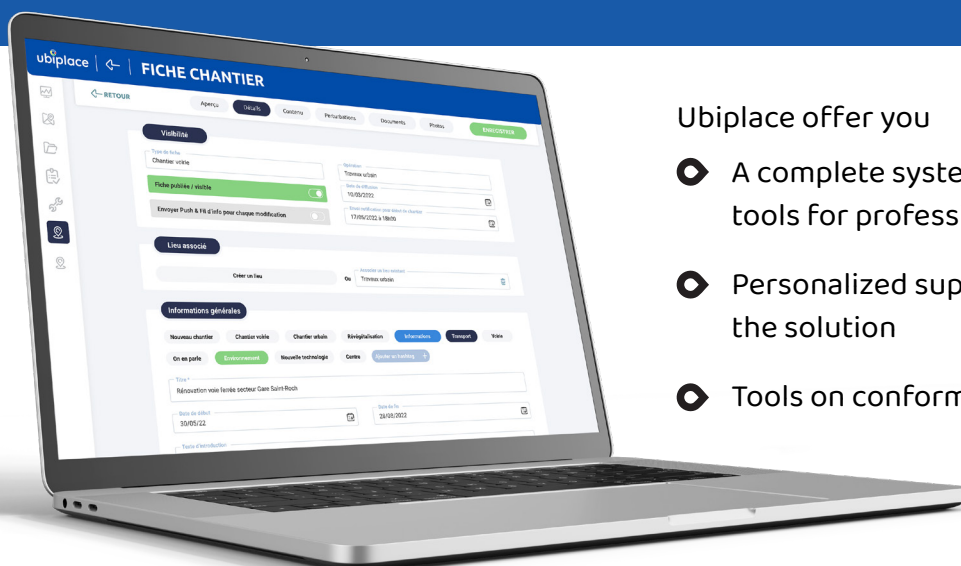

Concessionaire  
Public Company

Operator  
Maintainers

Users, Customer  
Shopkeeper

Ubiplace offer you

- 🕒 A complete system with ergonomic administration tools for professionals
- 🕒 Personalized support throughout the installation of the solution
- 🕒 Tools on conformity with the RGPD

# ubiplace

is a french start-up that developed innovative solutions in terms of data collection on-site. The application goes from pieces of information on public constructions zones or private to infrastructures operations, the state of the heritage, and climate vigilance.

Founded by 4 entrepreneurs, Egis entered the capital of Ubiplace, in 2021, up to 25%.

## OUR STRENGTHS

- 🕒 Inform and strengthen communication between stakeholders concerned with the construction zone.
- 🕒 Gain responsiveness in the processing of reports using an intuitive and standardized form of the template.
- 🕒 Prevent the difficulties through statistical tools that analyze the feedback of the resident's experience to take adequate decisions.
